HANUMAT

Introduction

It is a great pleasure to introduce Hanumat Global — a company driven by a simple vision: to bring high-quality, reliable dental solutions to professionals through innovation and Indian manufacturing.

Founded in **2019**, Hanumat began its journey as a distributor of quality dental products, serving dental professionals across India. In **2022**, we took our first major step into product development with the launch of our own brand, **Hanu Dent**, and entered the field of endodontic rotary files.

Our journey has been strongly guided by our founder, **Dr. Feminath Gopinath, MDS**, a renowned Endodontist and Implantologist with over **23 years of clinical experience**. His clinical expertise has shaped our approach — **we don't just manufacture products; we develop solutions with the needs of clinicians in mind.**

In **December 2025**, we reached a significant milestone by establishing our own dental file manufacturing facility at **Bio 360 Life Sciences Park, Thiruvananthapuram.**

Today, Hanumat Global stands for innovation, precision, quality, and self-reliance — with a clear mission to create world-class endodontic products here in India and make them accessible to dental professionals across the country.

This is our journey so far — and this is only the beginning

Our Founders

Dr Feminath G

Avanthika Feminath
BDS

Hanumat Global is driven by a shared vision of clinical excellence, innovation, and Make in India. Our founder, Dr. Feminath Gopinath, MDS, is an experienced Endodontist and Implantologist with over 23 years of clinical experience. Alongside him, Dr. Smitha S Anand, with her expertise in geriatric and specialised dental care, and Avanthika Feminath, a young entrepreneur pursuing BDS, bring together clinical knowledge, experience, and a new generation of entrepreneurial thinking. Together, they share a common goal — to make quality dental care more accessible and establish India as a leading force in global dental manufacturing.

Company Milestone

MADE IN INDIA: Building The Future Of Affordable Dentistry

Dental care in India has traditionally depended heavily on expensive imported materials, making quality dental care less accessible and affordable.

Recognizing this need, Hanumat Global Pvt. Ltd. took a bold step towards building an integrated manufacturing facility dedicated to endodontic rotary file systems.

By combining advanced technology, precision engineering, and international quality standards, our goal is to manufacture world-class dental instruments in India at affordable prices.

This is more than manufacturing—it is our contribution to the Make in India movement, making high-quality dental care more accessible while building a stronger future for India’s dental industry.

We believe quality dentistry should not be limited by cost—and that is the change we are working to create.

1. What does it mean for the citizens of India?

Dental care made more affordable and accessible to everyone, without compromising on quality.

2. How does it benefit the economy of our nation?

It reduces import dependence, creates employment, encourages local R&D, and strengthens India’s dental manufacturing sector.

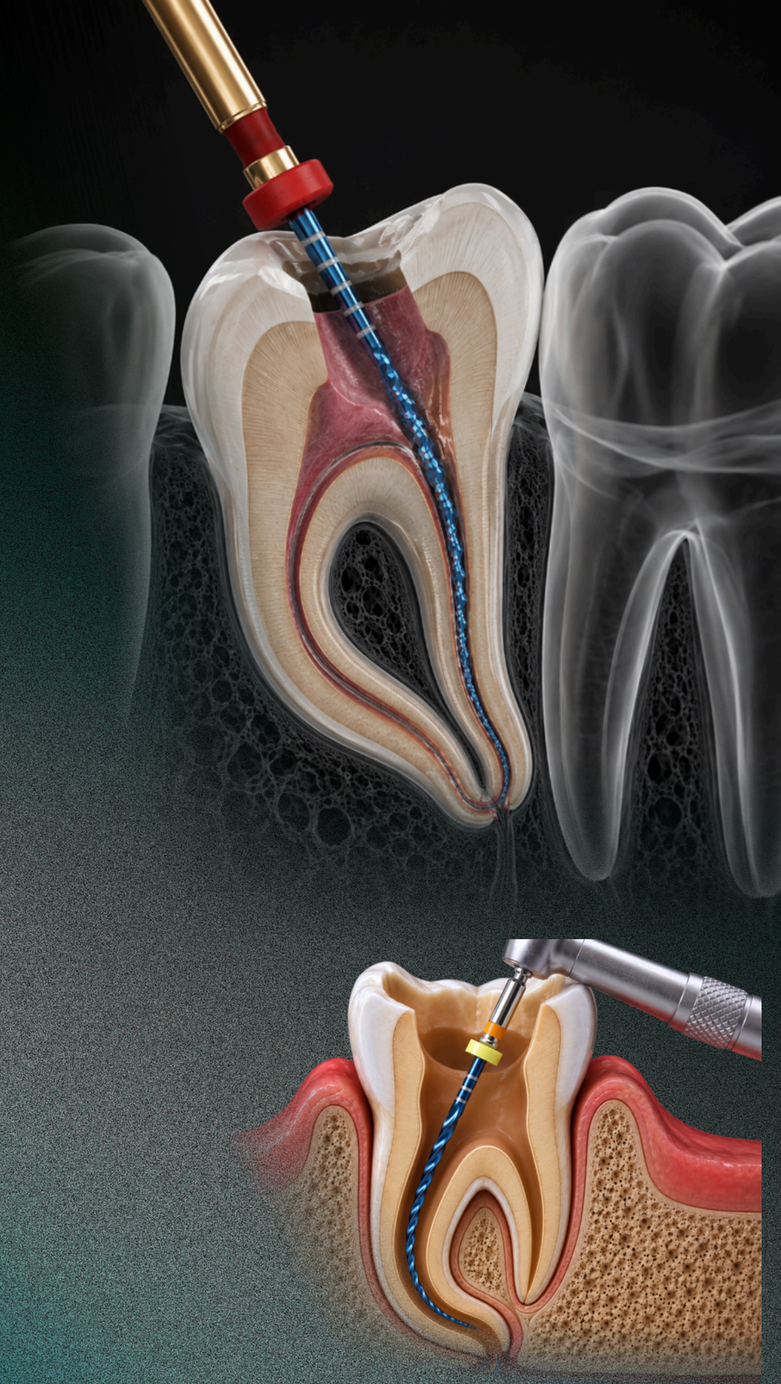

3. How do dentists benefit from Hanumat?

Dentists get access to high-quality products at better prices, helping them provide more affordable treatment to their patients.

Hanu Dent
Rotary Files

What are Rotary Files?

- Engine-driven instruments used in root canal treatment
- Designed to clean and shape infected root canals
- Help make root canal procedures more efficient and controlled

Why Hanu Dent?

- High-quality Nickel-Titanium alloy
- Excellent flexibility for curved canals
- Thin taper for smooth canal navigation
- Designed for durability and fracture resistance
- Quality performance at an affordable price

Engineered For Every
Endodontic Challenge

World-Class Manufacturing Facilities

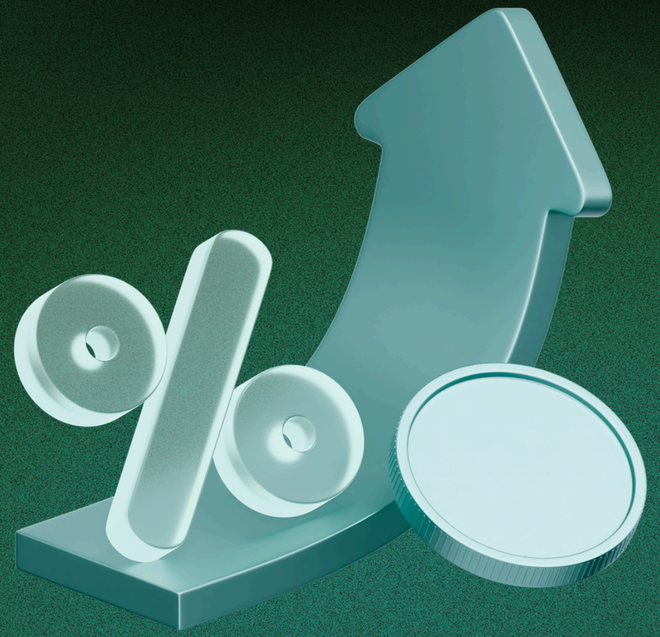

Our Vision

- **Local Manufacturing** – Build Kerala as a strong hub for dental and medical manufacturing.
- **Affordable Healthcare** – Reduce treatment costs through quality, locally manufactured products.
- **Employment & Skills** – Create skilled employment and strengthen the local industrial workforce.
- **Innovation & R&D** – Invest in advanced technology, indigenous R&D, and product development.
- **Global Standards** – Achieve international certifications and develop globally competitive products.
- **Exports** – Establish Kerala as an export base for Indian-made healthcare products.
- **Future Expansion** – Expand into wider medical product segments while maintaining sustainability.

Our Goal

Manufactured in Kerala. Developed in India. Exported to the World.
